

AWS Modernization Viability Assessment

EVOLVE Cloud Services in partnership with Amazon Web Services offers a fully funded Modernization Viability Assessment (MVA) of customers' Microsoft-stack workloads to provide a detailed plan to a modernized state, complete with technical details and level of effort. This blueprint helps customers eliminate tech debt, dramatically reduce costs, and unlock faster feature delivery on behalf of their own customers.

The Process

- Initial discussion of your goals for modernization from both business and technical standpoints
- Portfolio assessment with industry-leading tools to identify the best candidates for modernization and recommended modernization paths
- Technical deep dive into the agreed-upon workload by AWS certified Solutions Architects
- Development of recommended future state architecture, technology stack and CI/CD pipeline, along with at least one alternative
- Review of the MVA read-out, along with a proposal for a partially AWS-funded modernization project or proof-of-concept as part of AWS's Microsoft Modernization Program (MMP)

The Value

- A no-cost modernization assessment including modernization path, architecture and plan for your Microsoft-stack workload, funded by AWS
- Detailed estimate of cost savings by moving to cross-platform .NET on Linux, AWS Graviton, and license-free databases - [up to 45% savings](#) on .NET compute costs and [up to 70% savings](#) on databases
- Blueprint to reduce manual work by automating the build, test, deployment, and scaling processes
- Unlock faster innovation and feature delivery by decomposing legacy monoliths into smaller, individually-deployable services
- Modernization project plan and estimated level of effort included in the MVA readout
